

# RareWear

A Rare Genomics Initiative

**Interested in the rare disease space?**  
*Impact a rare cause, understand a new market!*

## ABOUT RareWear

RG RareWear is a new initiative hosted by RG to connect medical device companies to the rare disease patient community. This program aims to provide rare disease patients with the latest available medical technology to monitor and manage their condition, while mutually benefiting the sponsoring company by introducing their technology to a highly motivated and in-need population. We are looking for partnerships with companies that can sponsor technology for our patients and in return receive numerous benefits, including –

	<p><b>Access to rare market</b></p>		<p><b>Positive PR</b></p>
	<p><b>Active product marketing</b></p>		<p><b>Diversified device users</b></p>
	<p><b>Custom patient and market insights</b></p>		<p><b>Potential clinical trial participants</b></p>

## PREVIOUS SUCCESS & GROWTH

To date we have helped more than **250** rare disease families, and **600+** individual patients with over **\$3.5M** worth of next generation genome sequencing.

Rare Genomics has experienced great success and raised more than **\$2M** since 2012 with partnership programs such as our annual **BeHeard Science Challenge**.

In **2017** alone, over **\$750,000** in funds were raised to support **23** rare disease studies globally.

## OUR STORY

RG was founded in 2011 for the purpose of providing access to the latest in genetic technology and research to meet the needs of rare disease patients. The RG team works directly with families to help find a diagnosis for their loved ones. RG leverages in-house scientific expertise, volunteer advocacy, and mutually beneficial corporate & academic partnerships.
